Basics of NLA

NLA course

2018

If you do not know answers to the following questions or can not solve the following problems, you will likely go to re-examination.

1. Questions

- 1. Floating vs. fixed point representation of numbers.
- 2. Definitions of vector and matrix norms. Basic norms: p-norms (vector and matrix), Frobenius norm.
- 3. Complexity of basic linear algebra operations: e.g. matrix-vector, matrix-matrix products.
- 4. Definition of Hermitian and unitary (symmetric, orthogonal) matrices. Properties of their eigenvalues.
- 5. Definition of positive definite matrix.
- 6. Normal matrices and their properties.
- 7. Definition, existence and uniqueness of basic matrix decompositions: LU, QR, Cholesky, Schur, SVD, skeleton, eigendecomposition. Computational complexity of these decompositions.
- 8. Definition of condition number.
- 9. Definitions of key matrices: Fourier, permutation, Householder, Givens, Hessenberg, triangular, Toeplitz, circulant.
- 10. Formulation of Eckart-Young theorem.
- 11. Formulation of the QR algorithm.
- 12. Least-squares problem. Definition of a pseudoinverse.
- 13. Power method and how it converges.
- 14. CSR format.
- 15. Richardson iteration. Optimal parameter.
- 16. Krylov subspace. Idea of main Krylov methods: Lanczos, Arnoldi, CG, MINRES, GMRES, bicgstab. Differences between these methods and when to apply them.
- 17. Idea of ILU preconditioning.
- 18. Fast Fourier transform and how it helps to multiply vactor by Toeplitz matrix fast.

2. Problems

- 1. Find at least one eigenvalue and eigenvector pair of matrix $A = \begin{bmatrix} \sqrt{3}/2 & -1/2 & 0 \\ 1/2 & \sqrt{3}/2 & 0 \\ 0 & 0 & 1 \end{bmatrix}$. How many eigenvalues are there?
- 2. Find singular values of matrix $A = \begin{bmatrix} 1 & 0 \\ 0 & -1 \end{bmatrix}$
- 3. Write down formula for Householder reflection matrix
- 4. Write down formula for Givens rotation matrix
- 5. Show that if A is skew-Hermitian $(A^* = -A)$, then I A is nonsingular
- 6. Prove that $\|xy^\top\|_F = \|xy^\top\|_2 = \|x\|_2 \|y\|_2$ for any $x,y \in \mathbb{C}^n$
- 7. Solve $\frac{\partial}{\partial a} x^{\top} a$
- 8. Solve $\frac{\partial}{\partial A} \operatorname{tr} A^{\top} B$
- 9. Show that if matrix is triangular and unitary, then it is diagonal.
- 10. Eigenvalues of a unitary matrix?
